

JIT Pipeline Trace — BM g uc7 dfa n email match a low s MEDIUM t jit analysis

The chart displays the following metrics across 30 passes:

- Instruction count:** Ranges from 50 to 200. The count starts at ~50, jumps to ~190 at F1, and drops to ~185 at F2.
- Function count:** Ranges from 5.75 to 7.5. The count starts at 7, drops to 6 at F0, and remains at 6.
- Basic block count:** Ranges from 11 to 17. The count starts at 12, drops to 11 at F0, jumps to 15 at F1, and jumps to 16 at the end of the pipeline.
- Per-pass wall time:** Ranges from 0 to 3.5. The highest wall time is observed in the 'Module of function Pass4d' during the Initial phase.
- IR changed per pass:** A binary indicator (yes/no) showing when the IR was modified. Red vertical lines indicate 'yes'.

Pass Index and Phases:

- Prune:** Passes 1-2.
- Initial:** Passes 3-10.
- Fixpoint:** Passes 11-20.
- Post-fix:** Passes 21-22.
- Final O3:** Passes 23-30.

Fixpoint Iteration Boundaries (F0, F1, F2):

- F0: Between Pass 10 and Pass 11.
- F1: Between Pass 19 and Pass 20.
- F2: Between Pass 20 and Pass 21.

Legend:

- Prune (Grey)
- Initial (Blue)
- Fixpoint (Orange)
- Post-fix (Green)
- Final O3 (Purple)
- Fixpoint iter boundary (Dashed Red Line)
- Pass: metric unchanged (Dark Blue Line)
- Pass: metric changed (Red Vertical Line)
